

How to write an amazing article

Adam Herout*

Abstract

What is the problem? What is the topic? The aim of this paper? Lorem ipsum dolor sit amet, consectetur adipiscing elit. Fusce ullamcorper suscipit euismod. Mauris sed lectus non massa molestie congue. In hac habitasse platea dictumst. How is the problem solved, the aim achieved (methodology)? Lorem ipsum dolor sit amet, consectetur adipiscing elit. Fusce ullamcorper suscipit euismod. Mauris sed lectus non massa molestie congue. In hac habitasse platea dictumst. Curabitur massa neque, commodo posuere fringilla ut, cursus at dui. Nulla quis purus a justo pellentesque. What are the specific results? How well is the problem solved? Lorem ipsum dolor sit amet, consectetur adipiscing elit. Fusce ullamcorper suscipit euismod. Mauris sed lectus non massa molestie congue. In hac habitasse platea dictumst. So what? How useful is this to Science and to the reader? Lorem ipsum dolor sit amet, consectetur adipiscing elit. Fusce ullamcorper suscipit euismod.

1	1. Introduction	
2	With the rise of Large Language Models (LLMs) and	22
3	the increase in their capabilities, companies are mo-	23
4	tivated to use LLMs for automation tasks, including	24
5	testing and its tooling. However, LLMs are not plug-	25
6	and-play; specialized tooling is often required to pro-	26
7	duce reliable outputs. This work defines a formal base	27
8	into which LLMs rewrite requirements and test cases	28
9	written in natural language, so that the result is parsable	29
10	by coverage checking systems.	
11	There is an increasing demand to instrument sys-	
12	tems in natural language, including the specification	
13	of requirements and their test cases for testing systems	
14	and system components. Even when requirements and	
15	test cases are written in English, they must still be	
16	rewritten into a mathematical formal base so that exist-	
17	ing test-coverage techniques can be applied. A formal	
18	base into which LLMs can convert human-written text	
19	is therefore needed. This formal base must be able	
20	to express all motivational requirement examples. Its	
21	semantics must be easily interpretable by LLMs and	
	agentic systems, so that agents can rewrite require-	
	ments and test case descriptions from human language	
	into the formal base with high accuracy and without	
	changing the semantics; the formalism itself must be	
	unambiguous. It must also be convertible to existing	
	formal bases used by formal verification methods. A	
	good formalism should meet all of the mentioned cri-	
	teria.	
	2. How To Use This Template	30
	2.1 What Files are Here and Why	31
	3. How To Write the Paper — A Few Hints	32
	3.1 Images and Tables	33
	3.2 Sections and Subsections	34
	3.3 Keywords	35
	4. Some Useful Tools	36
	5. Frequently Used L^AT_EX Fragments	37

38 6. Conclusions

39 **[Paper Summary]** What was the paper about, then?
40 What the reader needs to remember about it?

41 **[Highlights of Results]** Exact numbers. Remind
42 the reader that the paper matters.

43 **[Paper Contributions]** What is the original con-
44 tribution of this work? Two or three thoughts that one
45 should definitely take home.

46 **[Future Work]** How can other researchers / devel-
47 opers make use of the results of this work? Do you
48 have further plans with this work? Or anybody else?
